CLEMATIS PRUNING GROUPS and GUIDELINES

For a Clematis to perform its best, pruning is sometimes necessary. Follow these guidelines to help you know when and how to prune based on the corresponding letter for each variety. These are guidelines only, call/email us with any additional questions.

Group A : Early Flowering (blooms in spring on previous season's growth)

generally do not need pruning but can be kept in check if needed; prune within one month after blooming, prune back 1-2' for overall appearance

Group B : Mid-Season Flowering (blooms in early summer on previous season's growth, repeats bloom in summer on current season's growth)

prune in late winter or early spring; remove dead or weak shoots and prune remaining shoots back about 1-2' for overall appearance

Group C : Late-Season Flowering (blooms in late summer on current season's growth, repeats bloom in fall)

prune in late winter or early spring; prune about 1/3 of shoots back about 1-2' each season for overall appearance

Group D : Small-Flowering (varieties that produce small flowers)

generally do not need pruning; can be pruned back after blooming if overgrown for the area in which they are located

CONVALLARIA (Lily of the Valley)

Often goes dormant after flowering. Sometimes orange-red berries will be produced in the fall which can be removed due to their toxicity.

-------------	-----------------	----	-------	-------	---------------------------	-----------------------------	---------------------------------------

VERBENA (Vervain)

We like the naturalizing effect this type of Verbena gives. But it will reseed readily, so a quick weeding out of seedlings in the spring should keep it contained to your desired area.

bonariensis

	bonariensis	☀️	42-48"	60" or more	purple to lavender	semi-woody, strong stems, medium green	early to late summer (Jun-Aug)
--	-------------	----	--------	-------------	--------------------	--	--------------------------------

a must-have for any butterfly garden

VERONICA (Speedwell)

Blackening and deteriorating foliage is normal throughout the season, but pruning regularly will alleviate these problems.

an improved variety over V. 'Sunny Border Blue'

VINCA (Myrtle, Periwinkle)

A venerable and popular groundcover. Keep moist if planted in sunny locations, and allow a year or two to get established. Once established, it is maintenance-free.

minor

	'Bowles'	☀️	6" or less	24-30"	large, violet-blue	glossy, deep green, spreading	early spring to early summer (Apr-Jun)
	minor	☀️	6" or less	24-30"	lilac-blue	glossy, deep green, spreading	early spring to early summer (Apr-Jun)

VIOLA (Hardy Violet)

Dead-heading and trimming of most varieties will keep plants blooming. Plant in partial shade for best summer color as Viola prefer cooler temps. Also keep moist if in full sun.
